THIS IS UNEVALUATED INFORMATION

25X1

The general OB of Soviet Army units in East Germany remained virtually unchanged until the end of January 1953. Training activity, which was conducted exclusively inside the quartering areas from November 1952 until early January 1953 has been shifted to the immediate vicinity of the posts and/or turned to short-term firing practices on most of the troop training grounds. These observations coincide with those made during the same periods in 1952.

Change of Quarters.

2. The following changes in the garrisoning of units in East Germany were determined:
- a. The 33d Gds Mtz Rifle Regt of the 9th Gds Tank Div, which was previously assumed to have been transferred from FACEWALK to a new barracks installation in the LYCHEN area in July 1952, has now been confirmed [REDACTED] being stationed near Castaven Lake, northeast of FUERSTENBERG.
  - b. Concurring information that numerous 120-mm mortars have been observed in the Mudra Kaserne in RIESA for several months allows the conclusion that the 218th Fort Regt of the 9th Tank Div was transferred from WEISSEN to RIESA in the fall of 1952. It is possible that quarters in WEISSEN were thus made available for the 45th Gds Tank Regt of the 11th Gds Tank Div whose new post has not yet been definitely determined.
  - c. The 180th Engr Bn of the XXVIII Gds Mtz Rifle Corps returned to its old RUDOLSTADT post. The battalion had been transferred from the OHEDRUF troop training grounds to the TEMPLIN area at the beginning of June 1952. The battalion had probably been engaged in enlarging the installations at the TEMPLIN troop training grounds.

25X1  
25X1Training.

3. The basic infantry training of Soviet Army units in the quarters of the garrisons was generally completed at the end of 1952. Almost all reports available definitely indicated that, except for the daily routine, training at platoon and company level was increasingly conducted on the terrain after the beginning of January 1953.

SECRET/CONTROL - U.S.OFFICIALS ONLY

5

25X1

Garrison training grounds and other suitable places in the immediate vicinity of the quarters were primarily used. Furthermore, short-term firing practices with live ammunition, lasting 2 to 3 days, were simultaneously conducted at the troop training grounds by small infantry, artillery and tank units, most of whom arrived by rail. To date, the following troop training grounds have been used for firing practice:

OHDRUF: elements of the 20th Gds Mecz Div, the 38th Army AT Arty Brig and the 308th Arty Brig ☐.

25X1

LOSSA: elements of the 21st Gds Mecz Div.

WITTSTOCK: elements of the 18th Mecz Div.

TEMPLIN: elements of the 6th Gds Mecz Div and/or the 25th Tank Div.

LIEPEROSE: elements of the 7th Gds Mecz Div.

WEISSWASSER: elements of the 9th Mecz Div.

KOENIGSBRUECK: elements of the 11th Gds Tank Div and other units of the First Gds Mecz Army.

JUETERPOG: elements of the 14th Gds Mecz Div.

ALTENGRABOW: elements of the 6th Arty Div.

The list indicates that all these troop training grounds were occupied by the same units that had practiced there in 1952. The engineer units, also switched from individual training at the quarters to training in the terrain at the beginning of 1953. Components of the 19th Gds Engr Bn of the Fifth Gds Army moved from WEINAR to the BAD KOESEN water training site on 10 January and engineer elements of the Fourth Gds Mecz Army constructed a pontoon bridge across the Oder-Spree Canal east of MUELLROSE on about 20 January. In general, the time for the training coincides with that observed in the winter of 1951/1952, except for the firing practice with live ammunition at ALTENGRABOW which did not start until late February 1952.

#### Personnel.

4. A troop train from the U.S.S.R. arrived in East Germany at the beginning of January 1953. Its destination could not be determined. The shipment may have consisted of soldiers who, having attended special training courses in the U.S.S.R., were rejoining their individual units. Effective 15 January 1953, only one instead of two pairs of leave trains runs daily from FRANKFURT/Oder to BREST LITOVSK and vice versa. A similar schedule was established in January 1951.

25X1

6

Transportation.

6. In January 1953, the traffic situation was still critical. While the large backlog of undischarged cars was almost eliminated by 20 January, the shortage of rolling stock remained. In early January, the number of operational railroad cars dropped below the 100,000 mark. The increasing number of slow-down sections on railroad lines indicate that ties and rails are overage. In spite of administrative efforts, it has not been possible to eliminate all operational difficulties.
7. On 20 January, total coal stocks available represented only 6.1 days' requirements. The coal reserve was 40 percent below the normal level of winter coal stocks.
8. Due to seasonal fluctuation, traffic through stations on the Oder/Neisse line and the Czechoslovakian border decreased. Special transportation operations included:
  - a. Grain imports from the U.S.S.R. and sugar and uranium ore exports to the U.S.S.R.
  - b. Individual shipments of arms and motor vehicles from the U.S.S.R. to the Soviet occupation forces.  
The return of former German freight cars from the U.S.S.R. to West Germany was probably completed in late 1952.
9. Work on the previously known railroad construction projects was delayed by a shortage of construction materials. The status of major construction projects is given below:
  - a. The construction of the second track on the DRESDEN - BAD SCHANDAU - SCHOENA railroad line was completed on 21 December 1952.
  - b. The second track of the FALKENBERG - FINSTERLADE - GOLLAUTZ line was completed.
  - c. The second track of the FALKENBERG - RUHLAND - PLESSAUFORST line was completed.
  - d. Work on the establishment of new railroad check points around WEST BERLIN was suspended.
  - e. The TEMPLIN-FRENZLAU railroad line is to be opened on 15 March 1953.
  - f. The reconstructed road bridge over the Lausitzer Neisse River in GOERLITZ, referred to as **Reichenberger Bridge**, was opened on 26 December 1952.

-7-

25X1

10.

the number of heavy-duty flatcars available in January had increased by 174 cars of 80 to 90-tons as compared with number available in October 1952. This increase was mainly due to the production of RRym-type cars.

25X1  
25X1Supply.

11. In December 1952, and as far as could also be observed in January 1953, supply traffic from the U.S.S.R. was about 40 percent below the normal rate of 1,000 carloads per month. In December, 250 carloads of ammunition were shipped to Germany. This quantity is considered low. It is noteworthy that ammunition was delivered for the first time to the MOCKREHNA ammunition depot. Previously, only captured German ammunition had been stored there. It appears that this installation will be taken over by the Russians. This assumption is supported by the fact that approximately 8,000 tons of German ammunition were shipped from MOCKREHNA to TORGAU/SUEPTITZ in October and November 1952. In December, it was observed that 72 model M-13 rocket launchers were exchanged for 80 rocket launchers of type M-31. A total of 120 carloads of tank spare parts arrived in December 1952. This rate of shipments was rather high. In January 1953, 26 tanks reportedly arrived in East Germany. As 11 of them were dispatched to tank repair shops, it is believed that the tanks involved had undergone complete overhauling in the U.S.S.R. The remaining 15 tanks were sent to FRANKFURT/Oder from where they were probably forwarded to Soviet troop units. As compared with traffic observed during the summer of 1952, interzonal supply traffic also dropped during the reported period. The only noteworthy shipments were assault boats dispatched from the Ernst Thaelmann Shipyard in BRANDENBURG to the GOFG engineer equipment park in FUERSTENWALDE - KETSCHENDORF.

German Volkspolizei.12. Order of Battle.

The OB of KVP units has not changed since December 1952. The majority of the units were confirmed in their quarters and posts.

13. Training.

Some of the units started their winter training at the end of November 1952. Regular basic infantry training for all units did not start until early January 1953. New instruction courses at the officer schools also began at that time. Regular recruit training and the speedy training of NCOs were emphasized. NCO schools were established in all regiments of the Armeegruppe Nord and the cadre units. NCO and basic training are scheduled to be completed at the end of March or the beginning of April 1953.

25X1

Training.

16. The training of recruits in January 1953 was held primarily in the barracks yard and drill grounds near the barracks installations, except for instruction courses at the quarters. Basic infantry training, firing practice, and the uses of special weapons and

SECRET/CONTROL - U.S.OFFICIALS ONLY

SECRET/CONTROL - U.S. OFFICIALS ONLY

-9-

25X1

equipment of the individual branches of service, such as artillery, mortar, AAA, and telephone line construction equipment were taught.

25X1,

U.S.S.R.

17. The following [ ] identified an additional number of units in the U.S.S.R. for the first time since World War II:

25X1

- a. [ ] ODESSA. [ ]

25X1

25X1

25X1

[ ] In the winter of 1946/1947, the division was still stationed in Bulgaria, and was subordinate to the Thirty-Seventh Army. It is plausible that the division is now stationed in the ODESSA area. See paragraph 17 d.

25X1

- b. [ ] RYAZANI, MOSCOW Oblast, on 19 October [ ]

25X1

[ ] The division was subordinate to the Ninth Gds Army and was last reported in the area of ST. POELTEN in April 1945. [ ] the

25X1

division should be stationed in the MOSCOW Oblast [ ] it is possible that the unit is stationed there.

25X1

25X1

25X1

25X1

- c. [ ] ISYASTAVI, KAMENETS PODOLSK Oblast. [ ]

25X1

[ ] 575th Rifle Regt, [ ] of the division was identified in ROVNO in March 1951. Thus, there is no doubt that the 161st Rifle Div is still stationed in the KAMENETS-PODOLSK Oblast, Carpathian MD. In World War II, the division was a component of the First Gds Army which is still located in the Carpathian MD.

25X1

25X1

- d. [ ] PERVOMAISK, ODESSA Oblast, on 10 October 1952.

25X1

25X1

[ ] It is [ ] safe to carry the division in the ODESSA MD. It is of interest to know that, like the 28th Gds Rifle Div, the 188th Rifle Div belonged to the Thirty-Seventh Army in World War II and after the war until 1946. See also paragraph 17a. Therefore, it is possible that the Thirty-Seventh Army which [ ] was said to have been reorganized into the Tenth Mecz Army after the war, is stationed in the ODESSA MD. If this were correct, it would be possible that one of the two rifle divisions had also been reorganized into a mechanized division.

25X1

25X1

- e. [ ] OSIPOVICH, Byelorussian MD, on 7 October 1952.

25X1

25X1

[ ] The division was last observed in the BRUENN area, Czechoslovakia, in April 1945. The headquarters of the IV Gds Cav Corps and the 9th and 10th Gds Cav Divs subordinate to it in World War II were determined in the North Caucasus MD in April 1946 [ ]

25X1

25X1

SECRET/CONTROL - U.S. OFFICIALS ONLY

SECRET/CONTROL - U.S.OFFICIALS ONLY

10

 25X1

 25X1

the division can safely be carried in this area. In World War II, the division was subordinate to the V Gds Cav Corps. The alleged appearance of another cavalry division in the White-Russian MD must be confirmed; however, the existence there of two such divisions is conceivable.
